

**How much time and money will it take to move your targeted, business-driven applications to a modern computing environment?**

A lot less than you think. The answer is not black magic. The answer is the proven, low-risk, repeatable process that Sector7 has refined since 1985. It's the process Sector7 has used to migrate more than 3000 mission-critical systems, such as the 911 emergency dispatch system for the Fire Department - City of New York. To find out how to preserve business logic, renovate your application, lower operating costs, minimize risk, and provide for growth and enhancement, call 1-800-867-8649 or visit us online at [www.sector7.com](http://www.sector7.com)
